

Bala Lodhia D.H.,D.Ac.

Topic: A discussion on three of some of the many oldest healing methods which help in the understanding of the clasp programme and the epfx-eclosion device. This will help beginners and older users.

- **Ayurveda**
- **Traditional Chinese medicine**
- **Homeopathy**
- **Example of an assessment form.**

Bala Lodhia D.H.,D.Ac.-IMUNE board member and trainer. Bala has trained and worked under Dr.Norma Harman (Narayani) for 4 years in South Africa working at free clinics providing homeopathic and natural therapies for the under privileged.

During this time combination homeopathic had evolved out of necessity in treating thousands of clients. Bala has been living in Canada since 1978 and has completed training in TCM acupuncture and served on the board of the Ontario Association of Acupuncture and traditional Chinese medicine from 1994 -2001, helping towards getting acupuncture regulated in Ontario. Bala has worked with Prof. Nelson since 1996, who kindly added all the 215 formulas in the matrix.

Healing Modalities:

- Ayurveda, /yoga, /spiritual
- Chinese medicine /tai chi, /chi gong, tui na.
- Native healers / herbalists
- Homeopathy
- Naturopathy / nutrition, lifestyle coaching
- Psychotherapy
- Energetic medicine

All the above healing methods are based on addressing all levels of life and treat with a **HOLISTIC APPROACH.**

Ayurveda: A way of life, health and spirituality connecting the existence of mankind in harmony with body, mind and spirit.

Ayur: :science of life

Veda: science of existence within the universal consciousness.

Terms used in Ayurveda:

- **Vata:** wind balance in the channels
- **Pitta :** acid /alkaline balance in the channels
- **Kapha :** phlegm balance in the channels
- **Nadis:** vibrational channels throughout the body
 - Various sources have described up to 72,000 nadis or energetic channels in the subtle human anatomy.

Marma points: points on the body that are switches for the nadis.

- **Soma:** moon, negative, cooling energy
- **Agni:** sun , positive, heating energy
- **Marut :** space, flow of energy through the positive and negative.

Chakras: there are 7 chakras that translate energy from a higher dimension: etheric, Astral, mental and causal bodies via nadis and marma points to physical body.

Physical Body:

- The current practice of medicine is based on a Newtonian model of reality, in which the body is treated as a grand machine controlled by the brain and peripheral nerves and the method of treatment is pharmaceuticals, chemicals and surgery.
- The Einstein model sees the human body as a multidimensional organism that is connected at all levels be it body mind and spirit. The method of healing comes from addressing all levels. The physical body has certain self healing electrical feed back loops ,such as the “current of injury” which tend to promote cellular repair and Orthodox medicine has acknowledged the use of radiation, electricity to alleviate pain ,repair fractures and shrink tumors.

Etheric Body:

- A Holographic energy field that carries information for the growth, development and repair of the physical body, while the genes with the DNA direct molecular mechanism which govern the development of the individual cell.
- The etheric body guides the spiritual unfoldment of the of the genetic process.
- The physical body cannot exist with the etheric body. Many illnesses begin at the etheric body.
- This system has not been discussed in Western science but much has been written in eastern esoteric literature.

Astral Body:

- The astral body is another body that is at a higher frequency.
- The astral body is energetically involved in experiencing both expression and repression of emotions.
- Dysfunction caused by emotional imbalances can impair flow of energy through the chakras eventually resulting in glandular and physical illness.

Mental Body:

- is a vehicle through the self manifests and expresses the concrete intellect.
- is made up of three levels, instinct, intellect and spiritual.
- Connected via chakras which are ultimately connected to the physical form
- Focused at major Endocrine & nervous centres.
- Healing at this level is stronger and produces longer lasting results
- Is concerned with the creation an transmission of concrete thought & ideas.

Causal Body:

- The closest level to the higher self.
- One octave higher on the energetic harmonic scale
- Is involved with the area of abstract ideas and concepts
- Connected to the higher spirit/consciousness.
- Is the repository of the sum of the total life experiences gained through successive incarnations.

Chakras:

- 7 chakras translate energy from all the higher dimensions : etheric, astral, mental and causal.
- This energy then flows to the physical form via nadis (channels) which causes the nervous system to respond affecting the endocrine glands causing the blood to release hormones making man what he is at a given time.

chakra	colour	planet	gem	Ayurvedic	mental	Nerve complex	charge	endocrine	therapy
Crown	Violet	Saturn	Sapphire	Vata	Higher mind	Mental	Neutral	Pineal Cerebral cortex	green emerald

Base	Red	Sun	Ruby	Pitta	Vitality Creativity	blood	Negative	Gonads Ovaries	Yellow coral

Traditional Chinese medicine:

TCM and acupuncture is approximately 5000 yrs old. The method is also a holistic method of therapy for disorders, whether physical, mental or psychological. The treatment modality involves balancing the CHI in the body and harmonizing the energy with nature, and environment paying attention to seasons and the time of the day.

Today with all the technologies available there is much research done using electrical, namely capacitance, resistance and skin temperature. Much more work is also done using lasers.

This method is the older form of biofeedback. The meridians are assessed and stimulation or sedation applied and balance is established.

This has been time and again proven successful using the epx-eclosion device of recent.

The circuits of measurements are know as channels and they flow along meridians which are directly connected with organs whereby these acupuncture can help with assessments of organ dysfunction and by stimulation or sedation restore balance in the organ.

Acupuncture uses:

- Pain
- Circulation
- Organ function
- Psychological disorders
- Addiction
- Behaviour
- Phobias, etc.

Basic Theory of TCM:

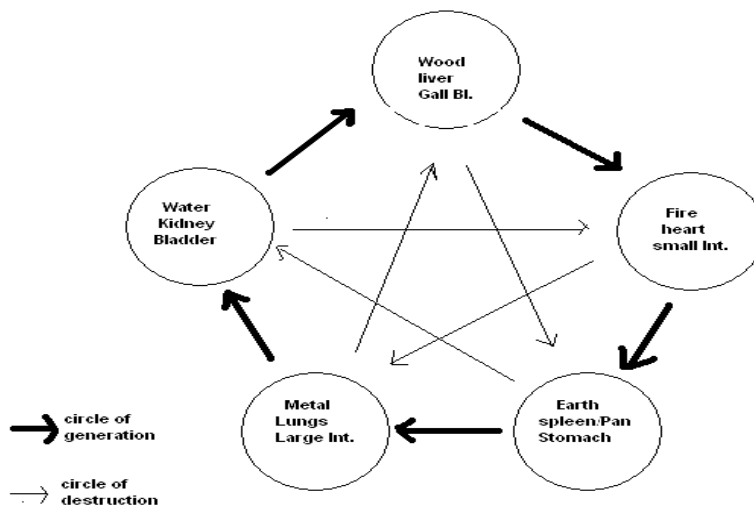

- Sees humans as a microcosm within the universal macrocosm, therefore the principles that determine the flow of energy throughout the universe are seen as applicable to the human energetic system
- There is a correlation between the changing equilibrium between polar opposites in nature namely yin and yang and the within the body.
- Acupuncture points are points that allow flow of energy from the etheric body to the physical body.
- There are 12 sets of meridians which are paired and mirrored on either side of the body.
- The flow of chi follows a biorhythmic pattern through the meridians based on the time, season and organ balance.
- Recently with more research electrographic scans can demonstrate meridians and points.
- This method is both diagnostic and therapeutic.
- The tongue and pulse diagnoses play a significant role in assessment of health.

Five Element Theory:

- The basic philosophy of TCM defining the flow of energy through the body and the correlation to five earthly elements, fire, earth, metal, water & wood.
- There are 2 basic cycles.
- **The circle of generation:** mother and son law where each element produces a succeeding element.
 - Fire produces earth by burning wood
 - Ashes are returned to the earth
 - Earth produces metal
 - Metal produces water, water sources are found near mineral deposits
 - Water produces wood: trees
 - Wood produces fire, hence the cycle begins again.
 - Metaphorically fire is the son of wood and the maker of earth
- **The circle of destruction:** each element destroys or absorbs the succeeding element.
 - A control cycle in that it represents the process by which the elements check and balance one another.
 - Wood can injure the earth; roots penetrate soil
 - Earth controls water; dams
 - Water puts out fire
 - Fire destroys metal: fire melts metal
 - Metals destroy wood; axe cuts wood. Hence the cycle continues.

Element	wood	fire	Earth	metal	water

Father of Homeopathy Christian Samuel Haneman

- Christian Friedrich Samuel Haneman was born in Meeisen 1755. His parents were in education but being very poor found it difficult to afford the cost of education for Samuel. Samuel Haneman was forced to apprentice as a grocer. A rector at a school encouraged Haneman's parents to have him stay in school. Being proficient at a language, he taught language in exchange for school fees
- He studied medicine in Leipzig at the age of 20 and managed to save enough money to study at the most advanced medical school in Vienna. While a student, he simultaneously worked as a physician and a librarian to the governor of Transylvania
- In the course of his duty, he spent two years in the marshy lands of Hungary, where ague was a serious problem. At the age of 24, he qualified and worked as a medical officer of health in Magdeburg, where he married the daughter of an apothecary
- In his experiences that followed, he realized that quinine was used to treat ague. Therefore, he went on to experiment by taking quinine himself. The result was that he developed the symptoms of ague (malaria). At this point, he decided to take one drop of quinine and add 9 drops of alcohol and succussed the mixture for approximately 240 times (calling it a 1x potency). A drop of this mixture is then mixed with another 9 drops of alcohol and again succussed (2). He continued to dilute the mixture to the potency of 6x, at which point quinine proper could not be detected in the mixture. After taking the 6x potency himself, all symptoms of ague and malaria disappeared. Thus 'the term : "similia similibus currentia," 'like cures like'
- After this, he went on to test other plants, reptiles and animals in the same manner and processed them all into potencies of 6x and above. The potencies were taken by healthy people and all reactions were noted (i.e. mental, physical and emotional) whether important or not and recorded in the Materia Medica.
- This potentization has resulted in an awakening of an inert power that was lying dormant in these substances, only to be awakened by the succussion process. Haneman's principle of treating people is a triangle of spirit: the true man, the material body and the life force, together forming a vital force.
- When this vital force becomes disturbed from disharmonies of living and thinking symptoms show up as diseases.

Haneman makes reference to Vital force:

Vital Force:

- **Physical body**
- **Mental body**

- **Universal body**

Physical body becomes disturbed by:

- **Environment**
- **Vaccinations**
- **Allopathic medications**
- **Surgery**
- **E.M.F**

Mental body becomes disturbed by:

- **Anger**
- **Greed**
- **Worry**
- **Jealousy**
- **Ego**
- **Self pity**

Universal body becomes disturbed by:

- **Inherited conditions**
- **Spiritual conflict**
- **Miasms**

	PSORA ITCH	SYCOSIS GONORRHOE A	SYPHILLIS	T.B.
GENERAL Hints and conditions	Deficiency Poor nutrition Debilitated Over- compensation Dry mucous Membranes Constipation Brachycardia Organ deficiencies	Excess Exuberance Diarrhea Tachycardia Secretion Over indulgence: Sex, alcohol Neoform mutations Hyperplasia Hyperglobulinemia Papillomatosis Arthritic nodes Callouses Swollen tonsils Ovarian and Hydatid cysts	Perversion, Degeneration on Peristalsis, with spasms. Arrhythmia, Desire to kill Destructive. Worst miasm in destruction Of vital force. 3 stages: chancre, ulcer , alopecia Suppression of any symptoms results in organ Destruction of organs, degeneration from skin to bone Corrosive acne, Metritic ulcers Malignant glioma Osteomyelitis Alopecia Ulcers all kinds	Psora & Syphilis Combined. Swollen glands Freckles Gets stung by bees, itching Psoriasis Wheezing Pneumonia Offensive discharges Repeat boils

Energetic Medicine:

Modern scientific ideology and the legislation which has produced in most industrialized countries, make it difficult for the physician to incorporate both personal experience and technical skills as equally valuable components in the decision making process for individual therapy. If a disease is classified incurable according to statistic or epistemologic probabilities as established by orthodox medical teachings, the patient will receive answers as “nothing can be done”, or “you will have to live with it.” This is the very reason that more and more people are seeking non conventional help to deal with health related problems.

Science in its true essence involves the human relationship to and the logical application of knowledge. Knowledge is a result of an individual learning process: ie., an intrinsically human phenomenon.

Blind Tests:” A ritual sacrifice made on the altar of scientific medicine.”

From history we see ancient civilizations like the Mayans through ignorance and decadence, had sacrificed virgins by hurling them into craters to appease the rain gods. The victims were small in number compared to the vast number of victims of blind test demanded by legislatures of many civilized countries. Single /double blind test only appease euphemisms for the stipulated test conditions which blind not only the human eye, but shut out all other human senses, be it emotional, consciousness, common sense and reason. Hence we have: the human element sacrificed on the altar of “scientific Medicine” and leaving out all levels of consciousness.

This consciousness plays the greatest role in understanding the scio/epfx device.

Ross Adey:

Ross Adey's greatest contribution has been to change the way we think about communication in the body. These Congresses are devoted to exploring the relationships between stress and health, and in the final analysis, good health depends entirely on good communication - good communication between the constituency of a system, as well as with its external environment. That holds true for all the hierarchy of living systems, ranging upward from the cell, tissue, organ, individual, and family, to a corporation, nation, or society. Good health depends upon good communication within and without. This is a basic tenet of all stress research, starting with Claude Bernard's concept of the need to maintain the stability of the milieu intérieur (internal environment), which Walter Cannon later described as homeostasis, and Hans Selye subsequently demonstrated in his General Adaptation Syndrome. All of these pioneers, as well as current researchers studying neurotransmitter responses to stress, have viewed these at a molecular level, as small chemical messengers fit into specific receptor sites on cell walls, much like a key fits into a certain lock. However, in the final analysis, all communication in the body takes place at a physical and atomic level, as infinitesimally weak electrical signals alter cell membrane permeability to allow the transfer of millions of ions back and forth in milliseconds.

This new paradigm of communication allows us to comprehend numerous well documented observations that can not be explained by Newtonian physics, or conventional laws of thermodynamics that govern ionic flux. In leading the development of this new model, Ross Adey has understandably antagonized authorities in the field whose reputations are based on preserving the status quo, as well as powerful groups with vested financial interests in not rocking the boat. I have witnessed this uphill fight over the years, and am pleased to report that the tide is turning, as more and more proof accumulates to support his views.

INTENT:

- In processing information from the qxci-scio devices there is constant interrelationship between the client ourselves and the higher consciousness. We have to remember that with the device the total intent is very important.
- In a book by Jonathan Goldman he quotes “ **frequency + intent = healing**”

Our intent can be further enhanced by:

- Adding to the faculty
- Add more info to report

Healing codes/frequencies that can be added to the faculty:

- 174 ___ turning spirit into matter
- 285___ grounding spiritual energy
- 396___turning grief into joy
- 417___reconnecting with the source
- 528___miracles and DNA repair
- 639___personal relationships and connection with spiritual family
- 741___serving difficult situations
- 852___final clearing
- 963___turning matter into spirit
